

**NOTES ON BASE**

This quadrangle is part of a series of topographic maps made from stereoscopic Viking Orbiter images.

The figure of Mars used for computation of the map projection is an oblate spheroid (flattening of 1/192) with an equatorial radius of 3,398.4 km and a polar radius of 3,375.7 km.

**ADOPTED FIGURE**

Mercator, Lambert Conformal Conic, and Polar Stereographic projections are used for this map series. The scale of the series is 1:2,000,000 at lat ±27.476° (Mercator), lat ±35.83° and ±59.17° (Lambert), and lat ±75.00° (Polar Stereographic). The projections have common scales of 1:1,952,947 at lat ±30° and 1:1,939,394 at lat ±65°.

**CONTOURS**

Contours were compiled on analytical stereoplotters that use stereoscopic Viking Orbiter pictures. The parameters for stereoplotters were computed analytically, based on the adjusted positions and orientations of the spacecraft cameras (Wu and others, 1982). Horizontal and vertical controls were established by analytical photogrammetric aerotriangulation (Wu and Schaffer, 1984), using the General Integral Analytical Triangulation (GIANT) program of the U.S. Geological Survey. Primary controls used in the control network include the Viking Orbiter Secondary Experiment Data Record, radio occultation measurements from Mariner 9 and Viking Missions (Klose and others, 1973; Lindal and others, 1979), Earth-based radar observations (Downs and others, 1975), and the Mars primary control network of the Rand Corporation (Davies and others, 1978). Elevation values (expressed in meters) are given with respect to the adopted Mars topographic datum. This datum is defined by a gravity field described in terms of fourth-order and fourth-degree spherical harmonics combined with a 6.1-millibar atmospheric pressure surface derived from Mariner 9 radio-occultation data (Lorell and others, 1972; Klose and others, 1973; Wu, 1978, 1981).

Local mismatches between contour lines shown here and images on controlled photomosaics are the result of improvements in control nets during the course of compilation. Estimated elevation accuracy is approximately 1 km (one contour interval).

Prepared on behalf of the Planetary Geology Program, Solar System Exploration Division, Office of Space Science, National Aeronautics and Space Administration, under contract W-15314  
Manuscript approved for publication, November 3, 1989

**INDEX OF STEREMODEL COVERAGE**  
This topographic map was made from the pairs of Viking pictures outlined above. Copies of various enhancements of these pictures are available from National Space Science Data Center, Code 601, Goddard Space Flight Center, Greenbelt, MD 20771.

**LOCATION OF SELECTED FEATURES**  
In order to emphasize the names, contrast was purposely suppressed in this reduced copy of the controlled photomosaic (I-1214) of this quadrangle. All names are approved by the International Astronomical Union.

**INDEX OF PUBLISHED TOPOGRAPHIC MAPS**  
Quadrangle availability is indicated by an "I" series number

**TOPOGRAPHIC MAP OF THE AEOLIS SOUTHWEST  
QUADRANGLE (MC-23 SW) OF MARS**

**NOTE TO USERS**  
Users noting errors or omissions are urged to indicate them on the map and to forward it to U.S. Geological Survey, Building 4, Room 412, 2255 North Gemini Drive, Flagstaff, AZ 86001. A replacement copy will be returned.
